I'm from a finance sector and want to switch to data science. So this video kind of helps me to go through your playlists accordingly. I have one important question, i.e. I also want to enroll to Data science courses where a certification has its value as I'm from finance sector so a validated certification would help me. So which is the best one to enroll in regards to materials/concepts for this year and also placement support. Thanks. Hoping for a reply.
